

St Giles Circus Pedestrian Safety Study

Pedestrian movement and accident analysis to advise on safety improvements for the junction of Oxford Street and Tottenham Court Road.

CLIENT	LONDON BOROUGH OF CAMDEN
LOCATION	LONDON
YEAR	2000

Intelligent Space undertook a major study of pedestrian movement and accident risk at St. Giles Circus for the London Borough of Camden. Using innovative CCTV-based surveying and computer-based visualisation techniques, we were able to show the how the poor location of pedestrian crossing facilities currently contributes to the £2.6m cost of accidents per year in this strategic intersection of Oxford Street and Tottenham Court Road.

This study advised Camden on the potential benefit of safety improvements in preparation for a planning inquiry into a redevelopment of the area.

Accident time profile
