

Harlow Town Centre North

Scoping study of pedestrian movement issues.

CLIENT	HARLOW COUNCIL
PARTNER	DAVID LOCK ASSOCIATES
LOCATION	HARLOW
YEAR	2004

Harlow Borough Council, English Partnership and the East of England Development Agency are redeveloping the northern part of Harlow town centre to enhance the area as a destination for retail and leisure uses. Intelligent Space provided a pedestrian movement analysis for the TCN masterplan, as part of the design team led by David Lock Associates.

A scoping study of movement issues was used to provide a pedestrian strategy for the design team in the early stages of the project. Once the design was further developed, we provided a spatial analysis of the DLA design was carried out using our pedestrian modelling software.

Crossing facilities

Observed informal crossings

Subway and on-road crossing

Vegetation barrier

Guard Railing

Blank façades

Crossing blocked

Existing informal crossings
